

ENVIRONMENTAL POLICY

OMAL takes up the challenge of growing and establishing itself on the market through the development of a sustainable business to *“meets the needs of the present without compromising the ability of future generations to meet their own needs.”*

The environment protection and the sustainability are essential parts of our trade policies and strategies. We manage the processes in order to guarantee the environment respect and protection, the optimal use of natural resources and raw materials.

We involve the stakeholders to provide products, solutions and services that meet their current and future needs and exceed the same market expectations.

Understanding the needs and expectations of the stakeholders we strengthen our competitiveness, the ability to maintain and promote new investments, the vitality and continuous development of our organization.

We implemented, apply and maintain an Environmental Management System in accordance with the UNI EN ISO 14001 standard, in order to pursue the continuous improvement of our environmental performance through:

- The compliance with the laws and the rules in force on environment protection and other applicable requirements, included in the contractual relationship with our customers.
- Identification of environmental aspects and management of the related impacts on which we can exercise control;
- The risks analysis and opportunities for improvement evaluation that could affect the effectiveness of Environmental Management System and the satisfaction of the needs of the stakeholders.
- Research and development of solutions that guarantee quality, reliable products with a long service life, carried out in compliance with the principles of sustainability.

With reference to the above-mentioned points, we set the following goals:

- Reduce the consumption of resources (materials, fuels, energy and water resources) through technological innovation or the adoption of better performing technical and organizational solutions both from the point of view of productivity and energy efficiency.
- Prevent possible risks of local pollution by the continuous monitoring of our production sites environmental impacts and along the supply chain.
- Minimize waste production by promoting recovery and / or recycling of materials according to the circular economy principles.
- Define the characteristics and performance of products that ensure the environmental impacts control during the service and at the end-of-life cycle.
- Improve communication within and outside the organization: involve the stakeholders at all levels in order to promote the diffusion of a sustainability-oriented work culture.

We believe that the balance between human and environment improves the quality of life, ensuring a better world for future generations.

The Mission that we respect every day makes us credible and reliable actors because with the valves & actuators we manufacture we take care of the environment and we improve the quality of the life making safer and more reliable plants.
